What will Sanako Language learning technology do for your children?

The SANAKO Lab and Study products are advanced language learning solutions designed to help your children succeed in their pursuit to acquire a second language. They combine the use of multimedia and the Internet with a suite of essential classroom management tools and various media sources to help teachers deliver effective and motivating instruction to your children.

- **Self-Access** –Although the students are engaged in individual studies, teachers can still communicate with and control the students whenever needed.

- **Tutoring** – The screen and voice of the teacher or a selected student will be transferred to the other students in the session. This allows the teacher or a student to instruct the other students how to use any application on their computer.

- **Web Browsing** – Internet Explorer browser is launched on student workstations allowing them to browse the Internet. The Teacher will be able to define allowed or denied web sites, as well as make the student browser follow the teacher's browser preventing the students from browsing independently.

- **Listening Comprehension** – Students listen to the selected media source and teachers can, for example, give the students different exercises relating to the audio material and select students to answer questions. The teacher can also let the students work with the source material independently and at their own pace or lock their player controls.

- **Discussion** – Students practice conversational skills and learn to express ideas and opinions in groups or pairs whose size can be set from two to all students. You can create the groups manually or let the Sanako program form the groups, either according to student numbers or randomly. The teacher can at any point listen to or take part in student conversations. Group members are shown in the classroom view and as a list on the student screens

- **Model Imitation** – Students listen to and repeat after a model track to practice the stress, rhythm and intonation of a foreign language, while their voices are recorded onto the student track. Then they can play their recording simultaneously with the native speaker track allowing them to hear how well they were able to imitate.

- **Reading Practice** – Students read a text which is recorded onto the student track, and can then go over their work independently to improve their proficiency. Reading aloud is a useful way of practicing intonation, rhythm and pronunciation and is ideal for students' individual practice. Before starting the activity for the student, teacher can browse for a text document which will be displayed for the students on the student monitor as the teacher starts the activity.

- **AP Exam** – The AP® Exam activity will allow you to securely go through the exam in several pre-set steps making sure that the students' responses are properly recorded and collected and saved to a CD or other media as specified by the College Board.
